Share-park Decentralized Parking Management

Abhinav Kalra (49003052) Chinmay Rai (49003065)

Blockchain & Cryptocurrency CSED 490U

Motivation

- Difficulty in finding a parking space
- Finding a cheap parking space
- Leads to problem and causes delays

But why blockchain?

Why Blockchain?

- Parking Management Industry has grown at Rate of 12.3% worldwide.
- In developing countries rate expected to increase sharply.
- Current Evaluation:
 - 7.43 Billion USD,
 - By 2023: 16 billion USD
- Many Big players are reaping benefits.

"Distribute benefits among the real actors: Owner and User!!"

What Have we Created?

- Login Based Decentralized Application
- For Parking Spots Rent-Out and Booking
- Based on Ethereum
- Hosted on a Private Network
- Simple User Interface
- Interacts with Blockchain using web.js

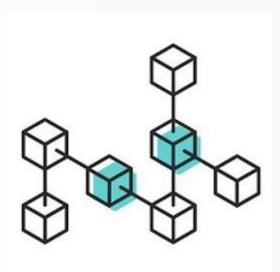

What is Required to Use?

- Golang Ethereum Client
- Connect to one of the nodes of network
- Network Must have one of the Instance of Contract
- Contract Address

Components

- Smart contract: defines behavior of system
- **Blockchain**: stores database of parking lots
- Data Structure : { Price Information, status, location }
- User Interface: helps interact with DApp.

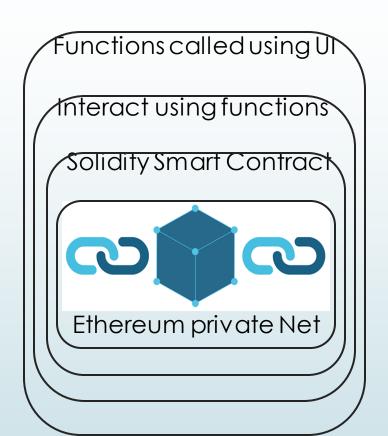

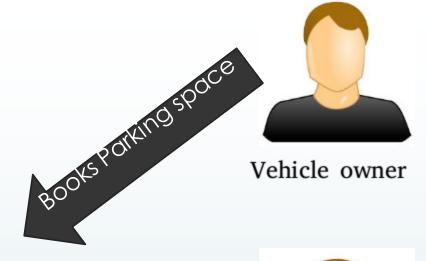

Architecture

Lists Parking Spaces

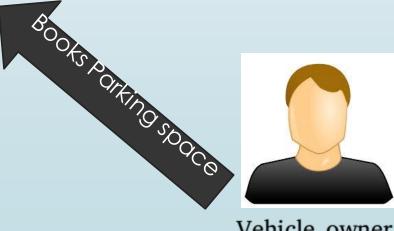

Parking Space owner

Vehicle owner

Vehicle owner

User Functions

Vehicle Owner

- Easily find a parking lot
- Hassle free booking
- Secure payment

Land Owner

- Publish their lands
- Regulate land status
- Instant secure remittance

System Features

- Each Actor a node in blockchain
- Record location available and booking
- Search nearby parking
- Interaction with Mapbox API
- Interaction with users wallet using web3

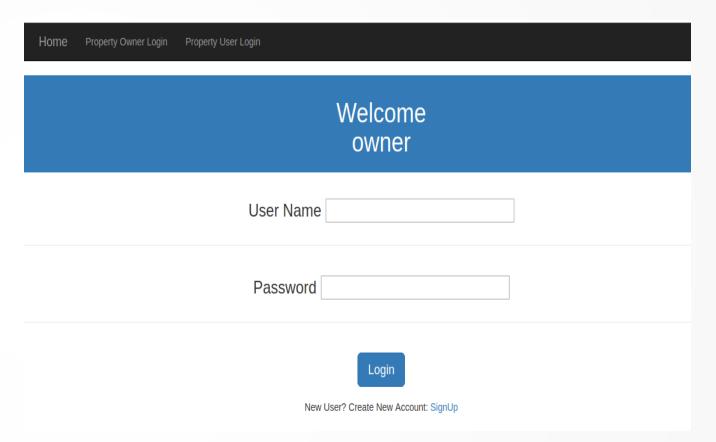

Non-Functional Features

- Cost-Efficient: due to competitive and open market
- •Secured: Payments using one of the cryptocurrency
- High Accessibility: to anyone & everyone wishing to park
- •High Response Time: real-time platform
- •Transparency: because its based on Blockchain

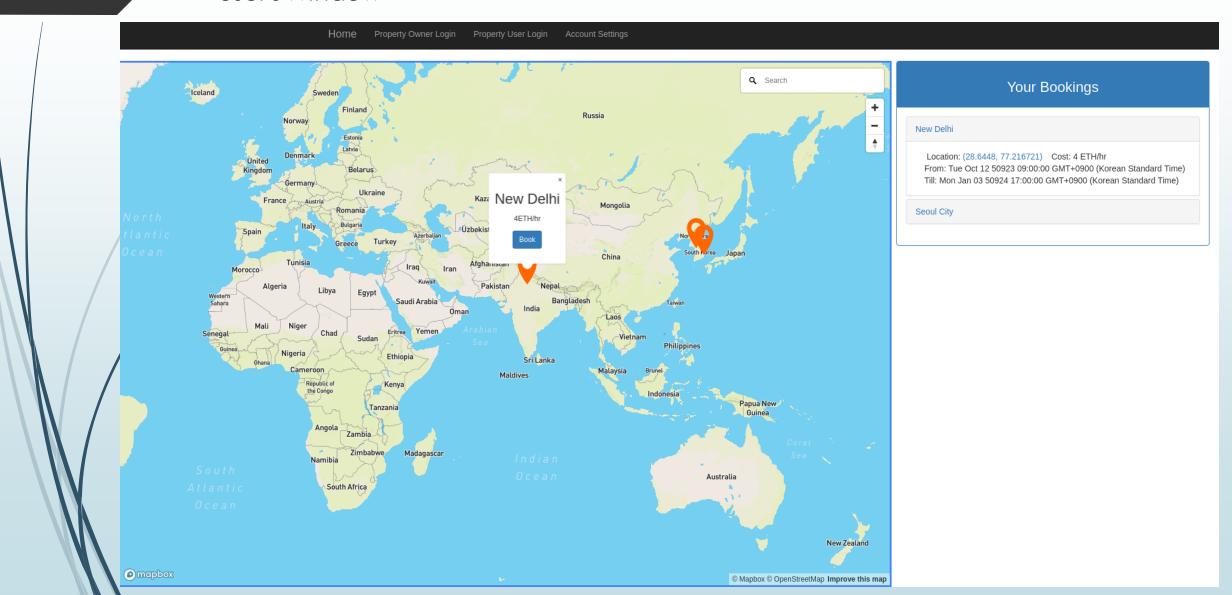

- Limiting Access by Registration
- Signup for new users
- Password protected login
 Based System

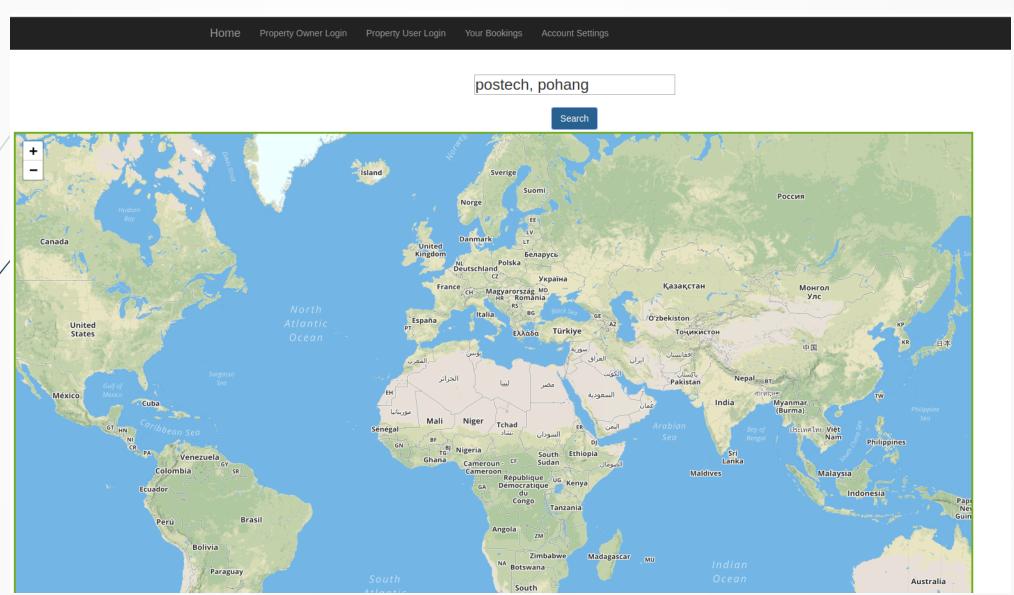

• Owner Home

| Home Pi | roperty Owner Login | Property User Login | |
|------------|--------------------------|-----------------------|---------------------|
| | , , | , , , | |
| Property 1 | | | |
| | Pohang City @2 ETH/hr | (36.0292, 129.3648) | |
| Property 2 | | | |
| | Seoul City @3 ETH/hr | (37.5326, 127.024612) | |
| Property 3 | | | |
| | | | Rent a new Property |
| | Lo | cation Address | Cost per Hour |
| | | | |
| | | Latitude | Longitude |

User's Window

Integrated Map for convenience of user along with Search Bar

Button Click to Contract Function Invocation

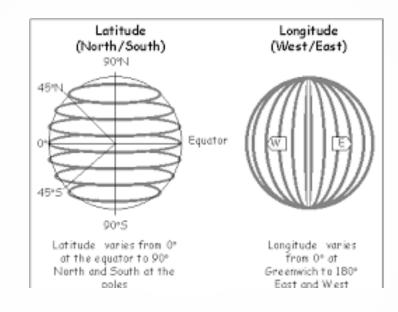

- Contract function are invoked by Clicking Buttons
- Html Buttons invoke JavaScript functions
- JavaScript Function Invokes web3.contract functions

```
function send_transaction(){
   web3.eth.personal.unlockWallet(investor,pwd,30)
   contract.fund()
   window.location.href = "Investor.html";
}
```

Data Structure and Variables

Geographic co-ordinate system to denote location

Struct ParkingSpot
Struct Booking

Functions

SignUp: New User Registration

2

reserveSpot – reserves the parking spot selected

3

abandonSpot – abandons the parking lot and pays the calculated rent 4

addRentOutSpot– enables ownerto rent out theirland as a parkingspot

Working with Solidity

- Avoid using Arrays in struct
- Use push() to insert values in an uninitialized array
- Backend comprises of integration of JavaScript and solidity
- Avoid using complicated structs and data structures
- Always look up for ways to find ways which consume least gas

What Do we Plan to do in Future

- Proper Integration of Payment system with our Dapp
- Changes in the Data Structure of Smart Contract
- Robust Testing of all functionality
- Security Isuues
- Possibly explore option of Using other Blockchains like Hyperledger
- Reason Being: No Transaction Fee and No Language Constraint
